No other reel has ever been built as strong and to withstand the elements better than Van Staal. The Van Staal drag system is completely sealed and waterproof, and water-tight seals are positioned throughout the spool, body and handle assembly. No other reel on the market offers this level of protection, and it's just as desirable for anglers who do not submerge their reels, because it's added protection from the elements that compromise the integrity of internal parts of normal reels. A Van Staal is not a normal reel. It features the largest main gear in the industry, which is machined from hardened 416 HT stainless steel and designed to help you fight and land big fish. This gear will never slip or strip under pressure, and the large size provides more fish-fighting torque per crank of the handle to give you more control during the fight. The pinion gear is also 416 HT stainless steel. The body, spool and handle are all machined from solid bar stock 6061-T6511 aluminium. The centre shaft and line roller are machined from solid titanium with a titanium-nitride coating.

Spin - Non Bail

Surf casters, rock fishers, kayak anglers, heavy-metal jiggers — and any other sportfishers who need the toughest spin reel ever made that can be fully submerged and still operate perfectly — this is it! The original VS left-hand-wind non-bail spin reels, first built in the early 1990s, still feature the tough 30lb of lock-down drag and are suitable for use with braid lines.

Code	Model	Bearings	Line Capacity	Ratio
26104	VS150B - Black Spinning Reel	7+1	310m/12lb	4.75:1
26105	VS150G - Gold Spinning Reel	7+1	310m/12lb	4.75:1
26116	VS250B - Black Spinning Reel	7+1	320m/20lb	4.25:1
26117	VS250G - Gold Spinning Reel	7+1	320m/20lb	4.25:1
26128	VS300B - Black Spinning Reel	7+1	320m/30lb	3.25:1
26129	VS300G - Gold Spinning Reel	7+1	320m/30lb	3.25:1

Spin with Bail

If you prefer a bail on your reel but still want the toughest spin reel ever made that can be fully submerged and still operate perfectly, Van Staal's VSB series is ideal for surf casters, rock fishers, kayak anglers, heavy-metal jiggers and any other sportfishers who fish to the extreme. The VSB Bail models are available in Gold in the 100 and 200 sizes and are suitable for use with braid lines.

Code	Model	Bearings	Line Capacity	Ratio
26133	VSB100G - Gold Bail Reel	7+1	205m/10lb	4.75:1
26141	VSB200G - Gold Bail Reel	7+1	365m/15lb	4.25:1

Right Hand Wind

If you hold a rod in your left hand and wind the reel with your right hand, but still want the toughest spin reel ever made that can be fully submerged and still operate perfectly, Van Staal's Right-Hand Wind Spin Reels are ideal for surf casting, rock fishing, kayak fishing, heavy-metal jigging and any other type of fishing extremes. The Right-Hand Wind models are available in Black or Gold in the 150 and 250 sizes and are suitable for use with braid lines.

Code	Model	Bearings	Line Capacity	Ratio
26109	VS150LG - LH (RHW) Gold	7+1	310m/12lb	4.75:1
26121	VS250LG - LH (RHW) Gold	7+1	320m/20lb	4.25:1

NEW Convertible Spin

If you like the strongest-reel-possible concept of the original Van Staal reels but a smoother feel suits your style of fishing more than the extreme hard-core, then the VM150 offers you the best of both worlds. The Van Staal pedigree is evident throughout the reel: the extra-large main gear and pinion gear are stainless steel, as is the handle arm and bail holder. The exterior is all machined aluminium, including the body, side cover, rotor, spool, drag knob, arm lever, handle knob and dust cap. The VM150 uses a five ball bearing system plus one anti-reverse clutch, and the impressive drag system runs five carbon fibre washers. The gear ratio is a powerful 4.9:1, and the retrieve rate (with a 90-percent-full spool) is 84cm per turn of the handle. The maximum drag capability is greater than 15kg. It's impossible to make a Van Staal original any tougher, but with the VM150 we've managed to offer the excellent strength that attracts anglers to Van Staal reels, but with a more mainstream feel that is ideal for jigging, casting poppers, spinning metals, live-baiting and every-day bait fishing. It can be interchanged for left- or right-hand wind.

Code	Model	Bearings	Line Capacity	Ratio
26147	VM150 Machined Boat Reel	5+1	260m/30lb Braid	4.9:1

C-Vex Fly

Van Staal C-VEX fly reels are the most sophisticated fly reels ever designed. They're the ultimate saltwater fly reel for surf, estuary, flats, inshore or bluewater. Named for their convex shape, which adds strength while reducing weight, these reels are precision-machined from aircraft-grade aluminium and anodised for saltwater protection. The spool is completely sealed, as is the waterproof drag cartridge. These reels can be fully submerged in saltwater, time after time, and still operate perfectly. Each reel can be set-up for left- or right-hand retrieve. The spool sizes accommodate plenty of backing and Australian swoffers can choose from either the 7/8 or 11/12 size, both in gold.

Code	Model	Line Capacity
26151	CVX78G - Gold C-Vex Fly Reel	225m/20lb + WF8
26159	CVX1112G - Gold C-Vex Fly Reel	320m/30lb + WF12
